Introduction

Participate in crypto, invest in professional traders and the entire cryptocurrency market with a fixed APY.

Let others trade for you and benefit from experienced traders who share their profits with you through the NERO token fund.

Profit from the entire crypto market without experience and risks, the only thing you need to do is stake NERO on our website.

Sit back and watch your investment grow month by month and benefit from compound interest and earn a passive income.

Long or short?

Don't make wrong decisions, let experienced traders analyze the market for you.

Riccardo Walter
CEO, Director

What is NERO?

NERO is a cryptocurrency that is hosted on the Ethereum blockchain technology and backed by an equivalent amount of U.S. Dollars, which serve as a share for the trading pool.

NERO tokens are issued by Neronumis Limited.
The currency is designed to always have a fixed value.

Thus, it is a safe investment method for investors, as NERO cannot lose value.

Problems

→ HIGH VOLATILITY

Other cryptocurrencies like Bitcoin, Ethereum, Ripple, BNB and many others are highly volatile which leads to unexpected changes in the market sentiment and sudden moves in price.

Factors such as decentralization, lack of investor confidence, limited oversight, absence of central authorities and many other factors make most of the other cryptocurrencies highly volatile.

→ CONVERTIBILITY

NERO can be exchanged for any other cryptocurrency, making it an alternative to fiat currencies, as its value is fixed and it is stable.

NERO is fully backed 1:1 by deposits of U.S dollars.

Benefits

STABILITY

You can keep NERO in your wallet and also consider NERO as a safe stablecoin.

TRANSPARENCY

All contracts on the Ethereum blockchain are publicly available and open source.

SECURITY

NERO is based on the Ethereum blockchain technology, giving it world-class security while meeting international standards and regulations.

BLOCKCHAIN TECH

NERO is built on top of Ethereum blockchain technology, making the currency secure and transparent at the same time.

Staking

Anyone can stake NERO at any time on our website or directly via the Smart Contract.

The rewards are fixed by the Smart Contract, there are no minimum stake periods, minimum amounts, lock periods or other holding mechanisms.

Staking, unstaking, claiming of rewards is possible at any time without any fees.

The rewards are settled by the Smart Contract exactly every second.

This means that the staker gets his rewards every second for the time of staking.

Conclusion

NERO is the first Ethereum-based stablecoin that offers the advantages of a stablecoin, with additionally rewards holders who staked the token with a guaranteed return.

Hence, NERO is one of the safest cryptocurrencies to invest in due to its stability,

NERO is one of the safest crypto stacking options available and investors can create a safe risk profile and can plan precisely because the rewards and the value of NERO is fixed and will never change.
